## PAX Centre panel for Infusion / Intubation

Here, the equipment for intubation is housed and protected in the centre panel. Once opened, everything is well-organised and visible right in front of you.

The central partition module „Infusion / Intubation“ holds the accessory for intubation neatly arranged at your disposal on a quite large area. Since the intubation is not often used, the accessory is safely stored and is quickly and good accessible in case of need.

PAX-Ampoule clip – The tiny clip miracle! Each clip can individual be positioned onto the ampoule clip rail and also be removed individually. The clip is tightly fixed into its position which makes removing an ampoule simple, quick and safe. By using one double clip, ampoules of different sizes can be fixed to the ampoule clip rail easily and efficiently. Depending on the distance between both clip-couples, ampoules with a content of 1 - 2ml, 5ml, 10ml and 20ml as well as prick ampoules with a diameter of up to 22mm can be stored. The clips can be arranged directly next to each other in a space-saving manner completely independent of ampoule size. The ampoule clip rail is then positioned on the rail frame as required.

## PAX Inner pouches

These welded inside pockets are compatible with many of our products. Even without hook and loop areas, they can be used as small packaging units, thus providing a clear overview. All the inside pockets have a label holder, which is accessible from the inside. A seal can be attached through the 2 zip fasteners on each bag. We offer inside pockets in 5 different sizes and 6 different colours.

Simply  
roll it up  
and grab it

Particularly  
space-saving  
and quickly ready  
for use

- ⚠ The inside of the bag must be well-organised.
- ⚠ The wings are folded to the inside prior to roll the bag. Thus it is secured that the material cannot slip out of the bag.
- ⚠ The rear side of the closed bag has been fitted with velcro. So the bag can be easily fixed to the back-pack.

- ⚠ All necessary utensiles for an intubation can be stored space-savngly and safely in the intubation bag S.
- ⚠ The loop arrangement and tube bag can either store the accessory of the standard intubation equipment besides necessary fixation material, etc. or as alternative it can store CPAP masks incl. accessory.
- ⚠ The intubation bag S is suitable for all backpacks to be stored in the corpus. For example the backpack Bravo L possibly offers space in a front bag together with an infusion bag M.

⚠ The rolled bag offers a safe storage and a clean working base, if opened.

⚠ Furhermore the can be closed again in a quick manner.

## PAX Rescue-BOA

PAX Rescue-BOA for the professional application!

Quick evacuation of the patient by means of the PAX Rescue-BOA tested according to DIN EN 1865-1. Delivery is carried out in a practical protection bag. In case of emergency the incorporated fleece blanket can be used for conservation of body heat.

### Intended purpose PAX Rescue-BOA

The PAX Rescue-BOA is used in order to evacuate a patient / person from an environment that makes a purposeful work impossible or when time pressure demands it. Moreover it serves to optimally immobilise the cervical and thoracic spine during and by proper use under the present circumstances. The application is restricted to the pre-hospital care and to the first phase of clinical care. Open wounds, fractures and injuries have to be treated according to the current rules of the specialty societies prior to the application. This product is about a medical product which is only to be used by briefed and regularly product trained skilled-personnel. The type of application follows the current, generally recognized medical directives and recommendations of the corresponding specialty societies. Furthermore the incorporated fleece blanket can be used as emergency warmth blanket.

## PAX Immobilization- Hand loop

In addition to the PAX Rescue-BOA (but also applicable with other rescue devices) the PAX Immobilization-hand loops are available. Especially with comatose patients it is necessary to position the arms tight to the body. In order to avoid arms hanging down in an uncontrolled way these can be easily fixed with the PAX Immobilization-hand loop.

Guarantees a constant positioning of the arms

In addition to the PAX Rescue-BOA

TPU  
WEBBING

Made of TPU webbing, particularly easy to clean thanks to smooth surface

When locked the PAX Immobilization-hand loop consists of three single loops. Using the loop with the yellow buckle, the PAX Immobilization-Hand loop can be fixed to the patient's trousers or belt.

When the loop is fixed the hand loops are positioned below the waistband. Now the hands can be fixed to the hand loops. To do that the loops can be wide opened by means of the belt loops and can be tightened up after positioning of the hand (wrists) in order to avoid the hands slipping out.

In that way the arms can be positioned quickly and safely one after another and the evacuation of the patient can be continued. The belt loops can be easily loosened when the loops are not needed anymore. It is also possible to open the loops.

Item no. 155155210

## PAX Vacuum Mattress - Mummy-Mat - Handles

This version of the PAX Vacuum Mattress - Mummy-Mat - Handles is identical in construction with the version 'handle bar' but has loop-in handles for transport. With the PAX Vacuum Mattress - Mummy-Mat - Handles we orientated ourselves on the body shape and shaped it as an oversized „V“. The „V“ oversize enables a better securing of the patient due to the larger span from the pelvis. It can be modelled around the patient beyond the sides, the patient is secured with the help of the colour-coded fixation straps or fixed in place. For cleaning and hygienic reprocessing, the strap and carrying loop eyelets are completely closed-pored. To avoid pressure points on the patient, the buckles of the PAX Fixation straps are placed on the outer sides of the mattress. An individually usable belt extension as well as the matching transport bag are already included in the scope of delivery.

## PAX Vacuum Valve with Adapter for Fingertip

### Fingertip

Consisting of valve for PAX vacuum products with glued-in PVC tube for attaching a fingertip. Supplied without safety loop and fingertip.

 0,03

### Air out - without any effort

PAX Vacuum Pumps are made of high-quality and robust materials. Through the good sliding properties of the piston in the aluminium cylinder and the short stroke distance the PAX Vacuum Pumps enable a fast and effective suction of your PAX Vacuum Products. The PAX Vacuum Pump is available in two versions.

PAX Vacuum Pump - Hand: For the use of the small and easy to store vacuum pump.

PAX Vacuum Pump - Foot: This pump is equipped with an additional foot bar made of robust stainless steel. This enables effective suction with only one hand.
